## ITERATION - 9

**System Documentation** - This iteration has the collated system documentation of the final versions of all system design documentation of the ByteXpress E-commerce system.

The meticulously compiled documents consist of the updated requirements lists, complexity matrix, logical and technical narratives, technical primitive, UML activity, sequence and state diagrams as well as the test cases and screen designs for all the use cases.

**Client Information** - Jannes Janse van Rensburg is the co-owner of Natuurlik. He is currently working as a Business Area Manager for DSV - Global Transport and Logistics.

## 1. Iteration Introduction

For this iteration the ByteXpress team have compiled a document that illustrates the collated system documentation of the final versions of all system design documentation for the ByteXpress E-commerce system.

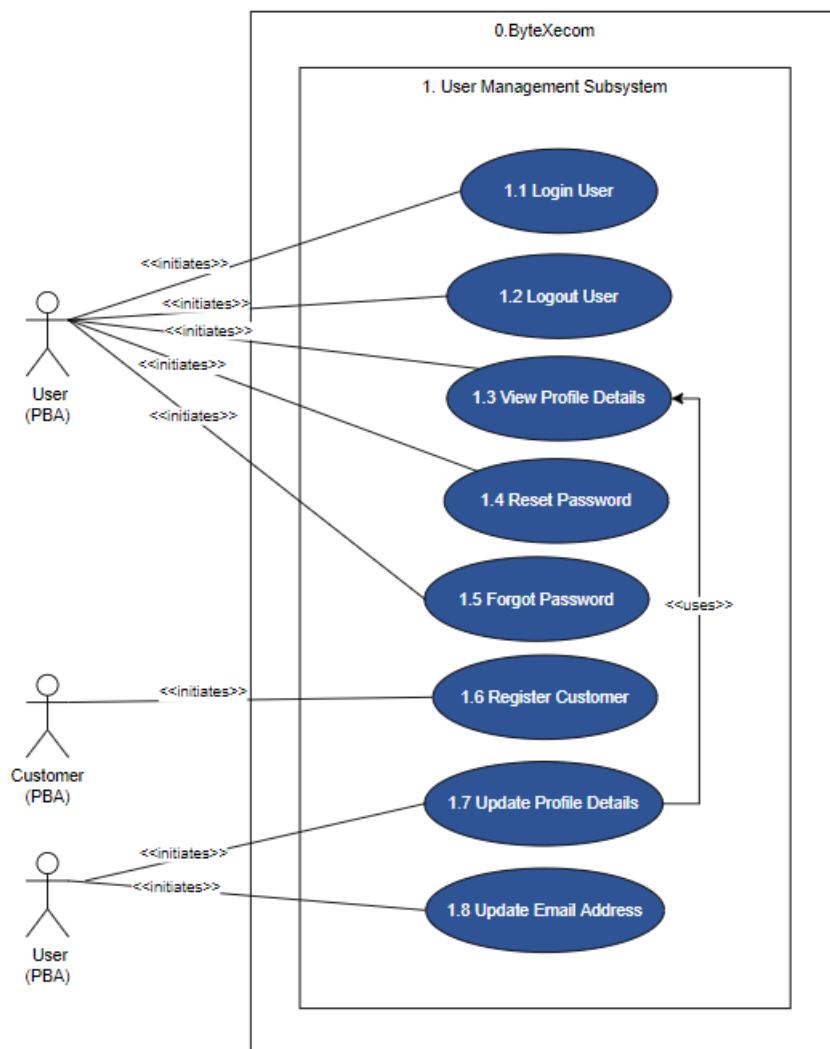

## 2. Use Case Diagrams

### Introduction

This section includes a use case diagrams which represents all the requirements of the proposed ByteXecom system and is categorized per subsystem. The main intent of the use case diagrams is to illustrate the interactions between identified users (also called actors) and the system.

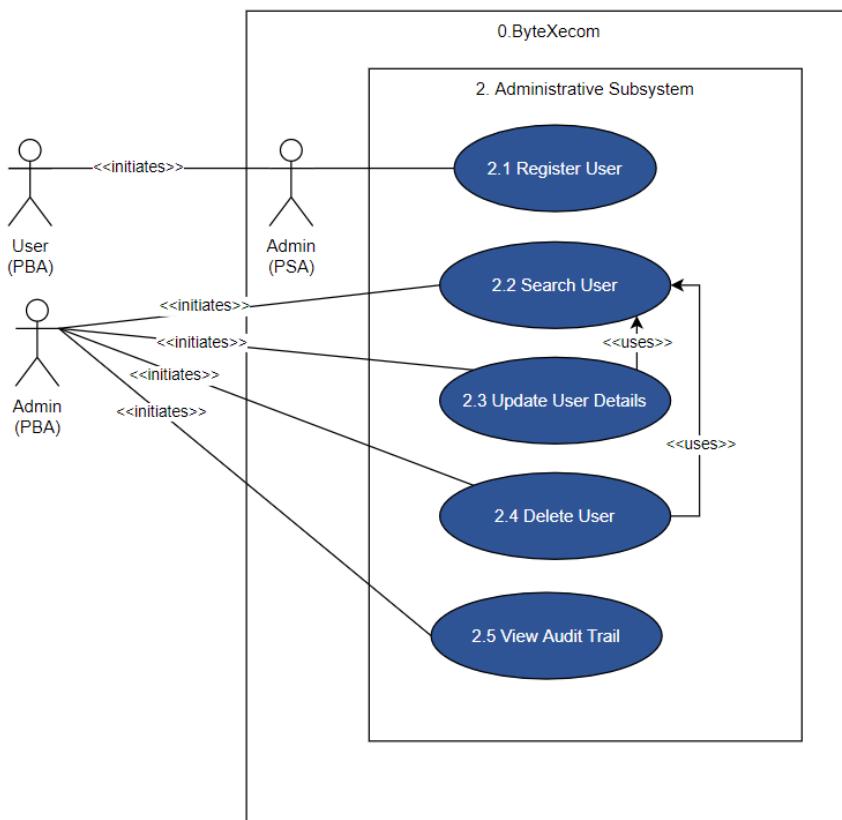

#### 2.1. User management Subsystem

## Conclusion

This concludes the use case diagrams section. It has provided a clear overview of all identified users that are to interact with the ByteXecom system, what other systems the ByteXecom system will interact with and all of the requirements to be catered for per subsystem.

### 3. Iteration Conclusion

In conclusion the compiled iteration detailed the final documentation for the design and development of the ByteXecom E-commerce system. The documents contained the updated requirements lists, complexity matrix, logical and technical narratives, technical primitive, UML activity, sequence and state diagrams as well as the test cases and screen designs for our use cases.
